

Microvision 310 Nurse Call Annunciator

The Microvision 310 is a low cost nurse call annunciator with numerous features. It receives 900 MHz spread spectrum transmissions from pull string stations, bed stations, pendants and door alarms. It supports up to 300 wireless devices and is fully programmable with the included software. The calls are displayed on a 8 line 40 character display. The door alarms have a time schedule. There are 6 relay outputs, an output for up to 250 dome lamps and an output for a radio paging transmitter for pocket pagers. The call data is recorded including response time and can be transferred to a computer to display the call data with the Omniwatch reporting software.

Features

- Uses pull string stations, bed stations, pendants and door alarms
- Has 6 relay outputs
- Audible alert with volume control
- Output for an external piezo sounder
- Devices can be programmed as momentary, follower or latching
- Door alarms have an arm and disarm time schedule
- 900 MHz spread spectrum technology
- Output for a paging transmitter to send a text message to a pager
- Serial output for corridor dome lamps
- Records call data including response times for reporting
- Call data can be transferred to a computer for management reports

Dimensions: 10.1" x 8.1" x 4.0" Power Input: 12VAC (transformer included)
